

Project 1 **E-commerce Analysis.**

Objective.

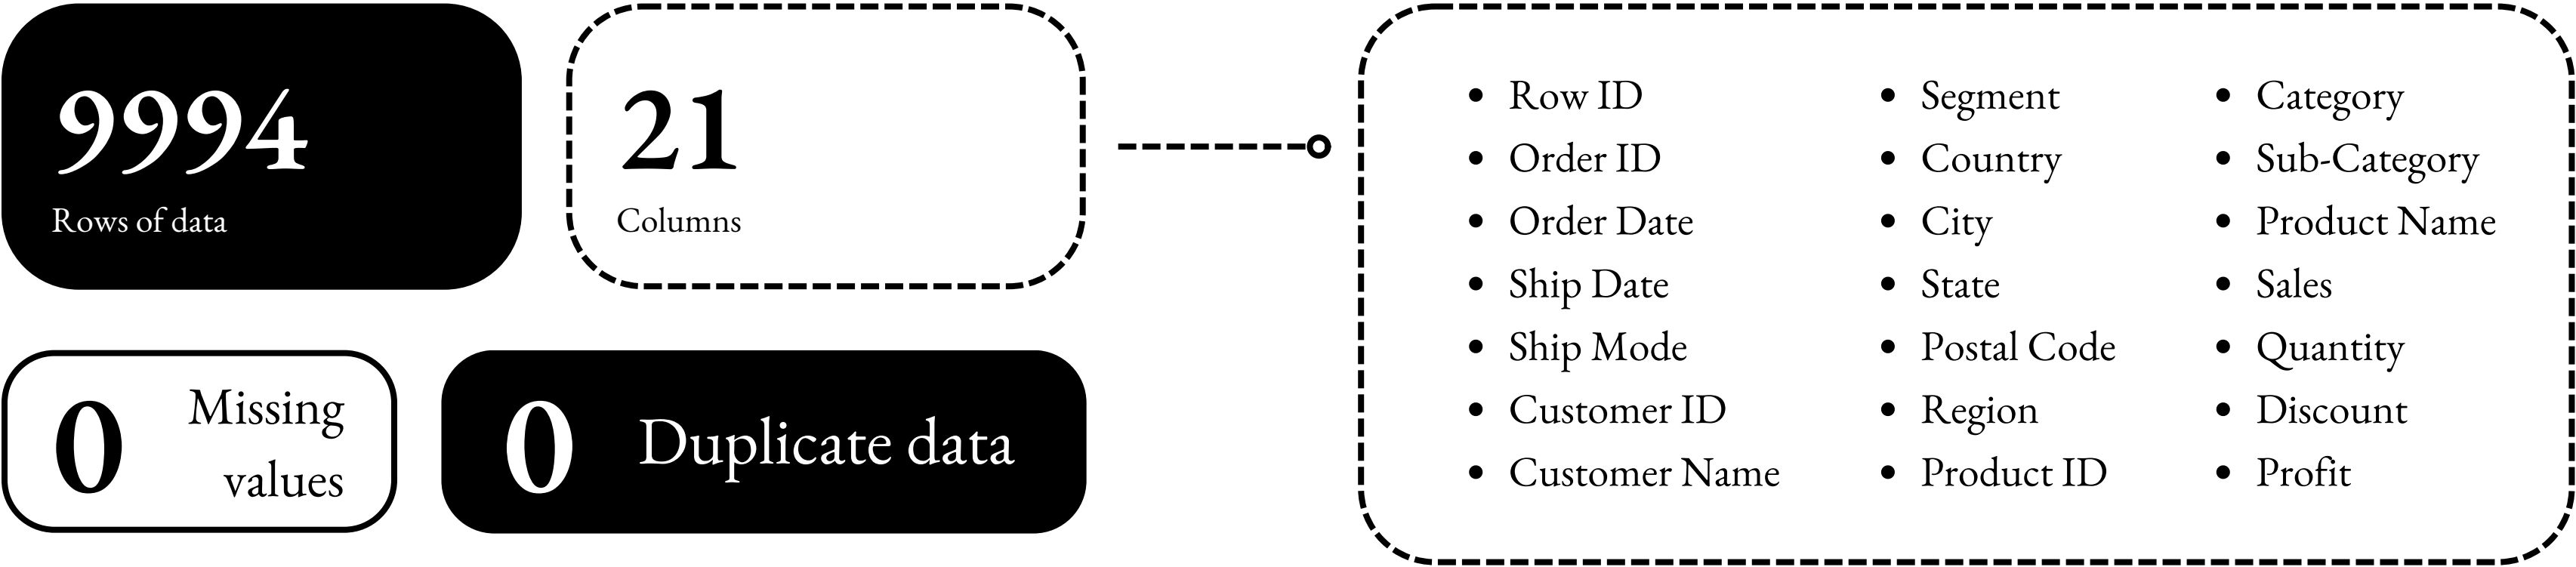

To analyze e-commerce sales data using the Sample Superstore Dataset across product categories, customer segments, and time periods, aiming to:

- Identify monthly sales patterns and seasonal trends
- Determine top and bottom performing product categories and sub-categories
- Examine profitability across different business dimensions
- Evaluate customer segment efficiency and performance

This analysis aims to uncover insights into e-commerce operations.

Dataset Summary.

The dataset includes data sales from 2014 to 2017.

Key columns used in this analysis:

----- *Order Date* ----- *Sub-Category* ----- *Sales*
----- *Category* ----- *Profit* ----- *Segment*

Analysis Highlights.

Technology

Top Categories → 50.8% profit

Phones

Sub-Category Winner → \$330K Sales

Home Office

Efficiency Leader → 7.12 ratio

Consumer

Highest Volume, Lowest Efficiency → 8.66 ratio

Tables

Biggest Lost Maker → -\$17K Profit

Seasonal Sales Deep Dive.

Sales by Month

The highest sales happened in the end of the year or Q4, meaning that many customers doing transactions because of the end-year discount.

Technology: The Profit Powerhouse.

Profit by Category

-----○ Technology is the winner on Category.

The pie chart shows that 'Technology' has the important role in generating profit with 50,8%, followed by 'Office Supplies' with 42,8%, while 'Furniture' has the lowest profit contribution with 6,44%.

Customer Segment Efficiency.

Sales and Profit by Customer Segment

‘Customer’ segment showing both the highest volume and profitability.

In this case, the Consumer segment requires \$8.66 in sales to generate \$1 of profit, making it least efficient.

Sub-Categories Analysis.

Profit by Sub-Categories

‘**Copiers**’ has the highest profit with \$55K.

However, we can also clearly see that ‘**Tables**’ has a negative profit of -\$17K, indicating losses in this sub-category.
